TP
L=4
=

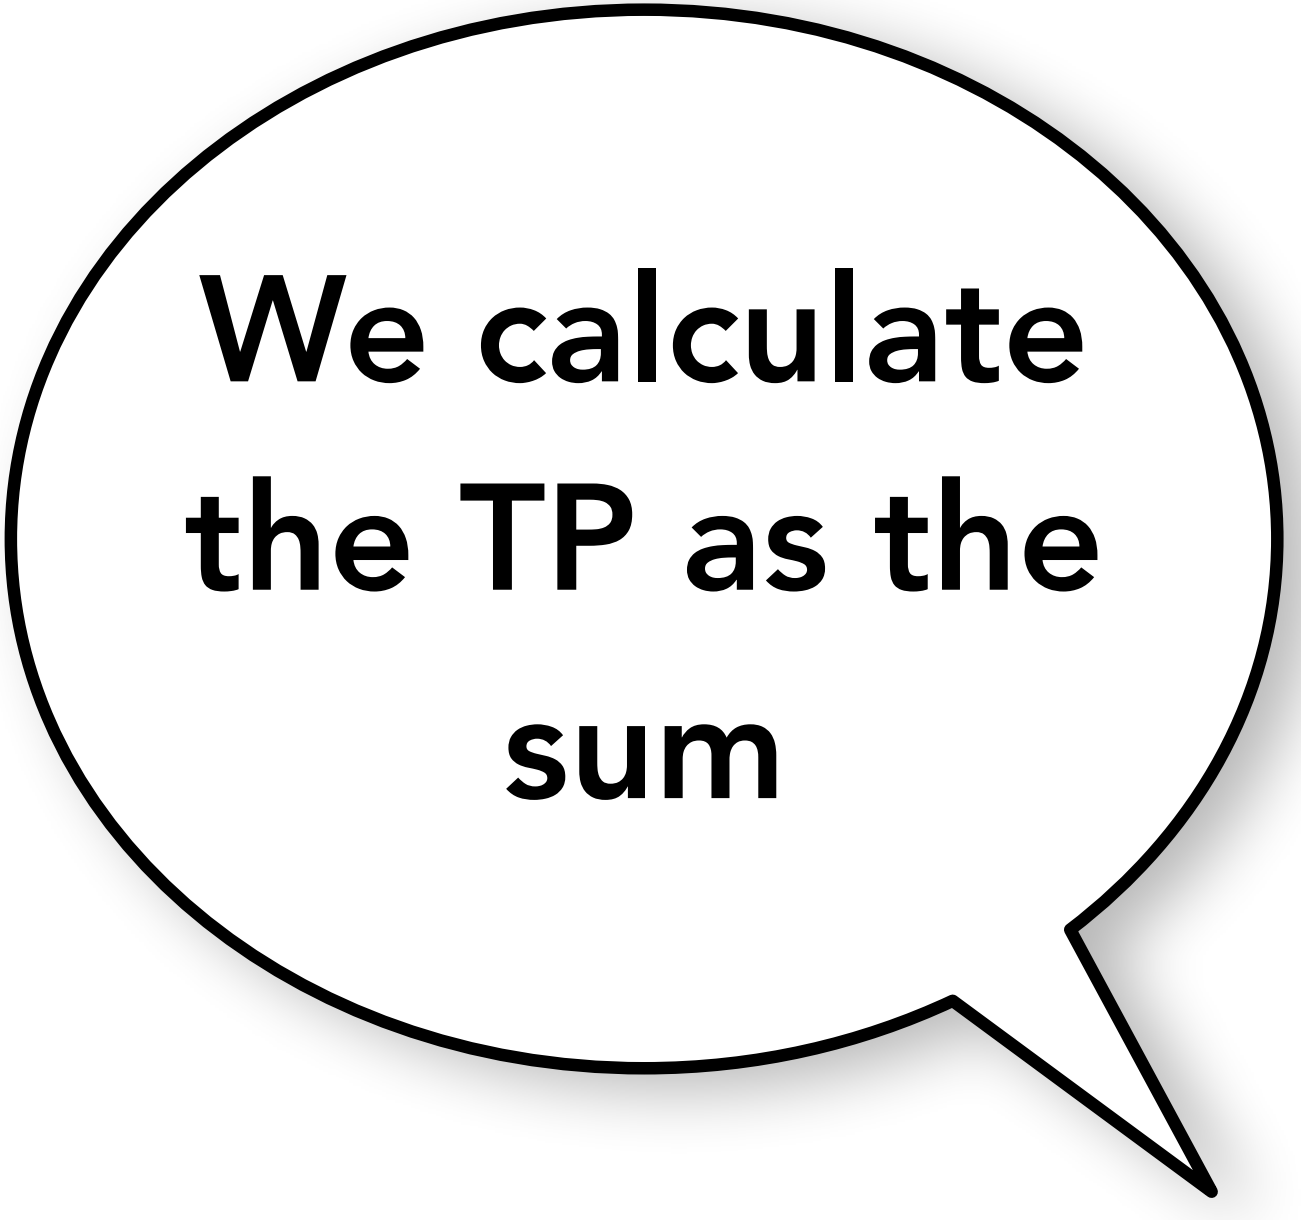
+ + + = 320

$$AP_{L=4} = \frac{\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad\qquad}{4} = 80$$

MP4

110

Suppose we have the MP for three workers:



We calculate the TP as the sum

We calculate AP = TP/L

If the next worker's MP is higher than that average (70)

Average RISE

Suppose we have the MP for three workers:

We calculate the TP as the sum

$$AP_{L=3} = \frac{TP_{L=3} = 50 + 70 + 90 = 210}{3} = 70$$

If the next worker's MP is higher than that average (70)

Average RISE

$$AP_{L=4} = \frac{TP_{L=4} = 50 + 70 + 90 + 110 = 320}{4} = 80$$

Suppose we have the MP for three workers:
