

# Subsidy

Tax

Floor: \$0.8

$$Q^d = 100$$

$$P_e = 0.50$$

$$P_e = 0.50$$

Floor: \$0.8

$$Q^d = 100$$

0

Floor has the same effect of imposing a tax on consumers and a subsidy to producers

The size of this Tax to consumers and  
Subsidy to producers is this area:

Tax

# Subsidy

~~Tax~~/Subsidy =

$$\frac{(0.8 - 0.50) \times (100)}{2}$$

2

$$(0.3) \times (100)$$

---

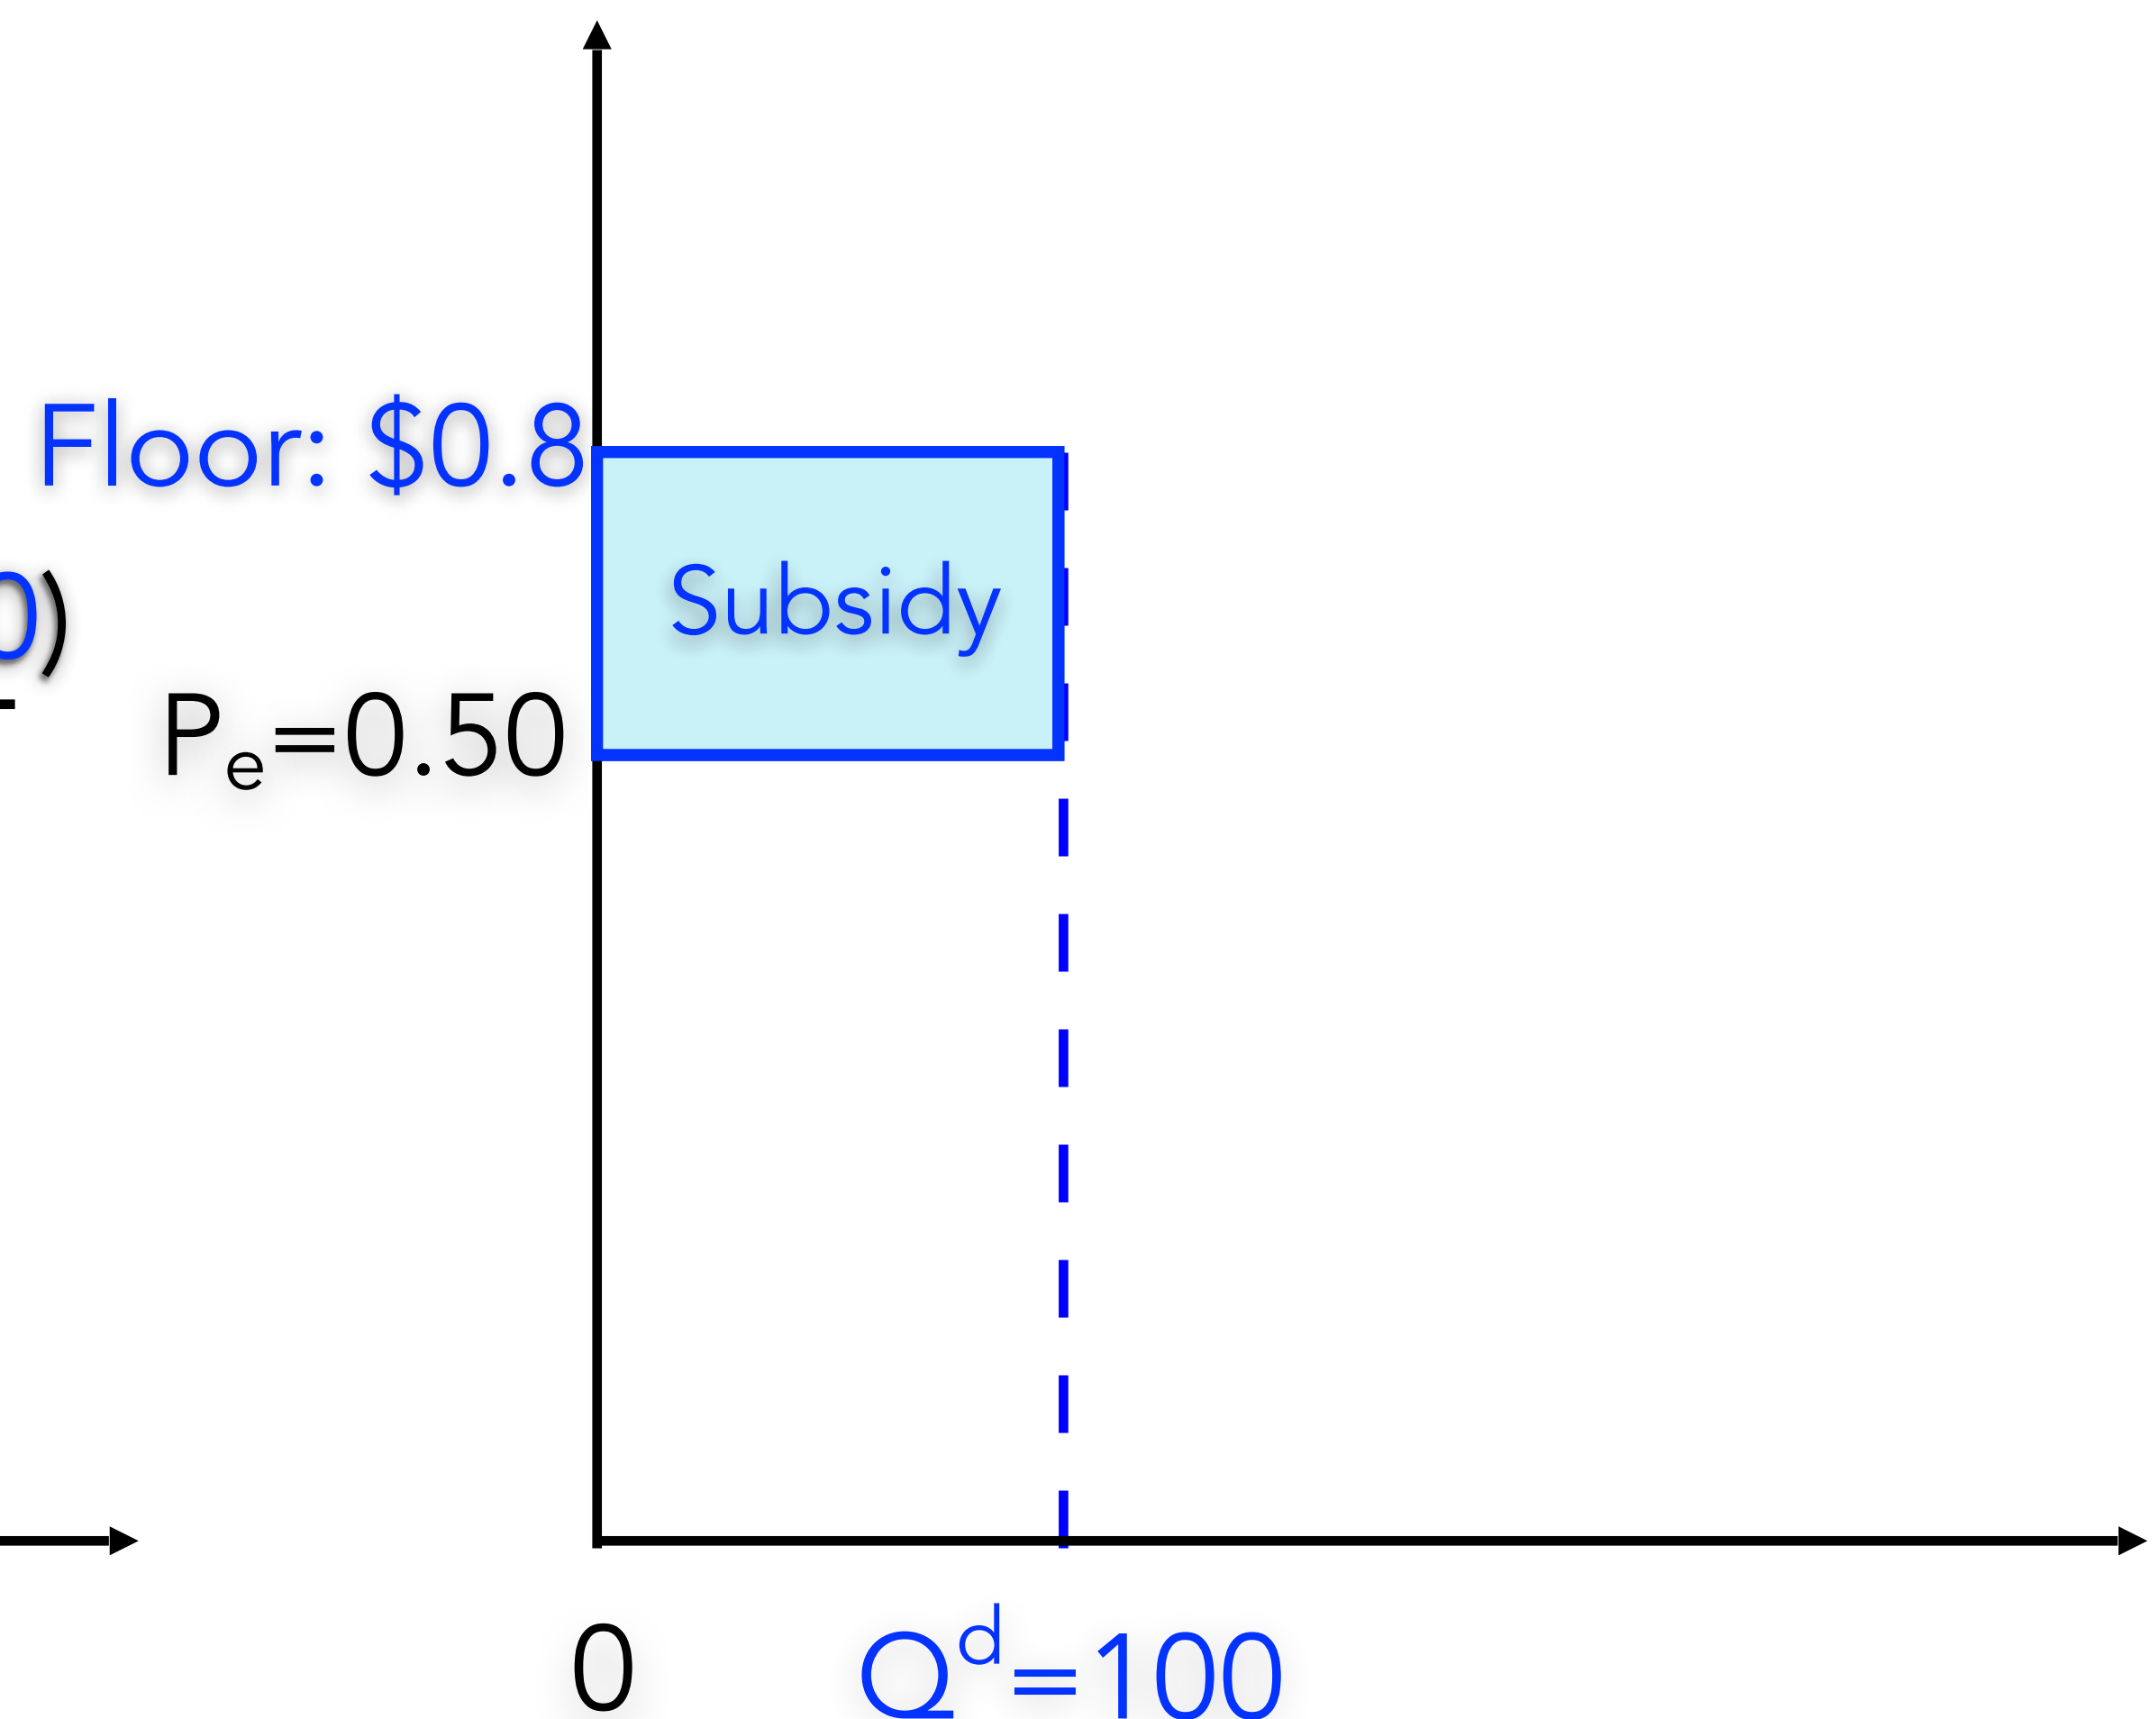

$$2$$

**\$15**

The size of this Tax to consumers and  
Subsidy to producers is this area:

$$\begin{aligned} \text{Tax/Subsidy} &= \\ &= \frac{(0.8 - 0.50) \times (100)}{2} \\ &= \frac{(0.3) \times (100)}{2} \\ &= \$15 \end{aligned}$$

# The imposition of a Floor (for example price supports)
