Q1

Demand elasticity = -1.5 Supply elasticity = 0.5.

Demand increase by 10% calculate the change in Equilibrium Price

$\% \Delta P_e = 10\%$

%

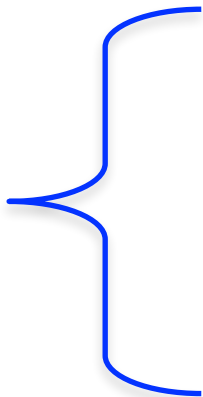

Pre

5

$$\% \Delta P_e = \frac{\% \Delta \text{Demand}}{(e^d + e^s)}$$

$\% \Delta P_e$

$$\% \Delta P_e = \frac{10\%}{(1.5 + 0.5)}$$

Equilibrium Price
increase by 5%

So

D₁

Do

Demand elasticity = **-1.5** Supply elasticity = **0.5**.

Demand increase by 10% calculate the change in Equilibrium Price

$$\% \Delta P_e = \frac{\% \Delta \text{Demand}}{(|e^d| + e^s)}$$

$$\% \Delta P_e = \frac{10\%}{(1.5 + 0.5)}$$

$$\% \Delta P_e = 10/2$$

$$\% \Delta P_e = 5$$

Equilibrium Price
increase by **5%**
