

A 700 increase in government spending
generates a 7,000 increase in GDP

Example: $\Delta G \Rightarrow 700$ MFC $\Rightarrow 0.9$

NY = 7,000

AE₁

AEo

Change in Equilibrium Y :

= ΔG

$$\left(\frac{1}{1 - \text{MPC}} \right)$$

= 700

1 - 0.9

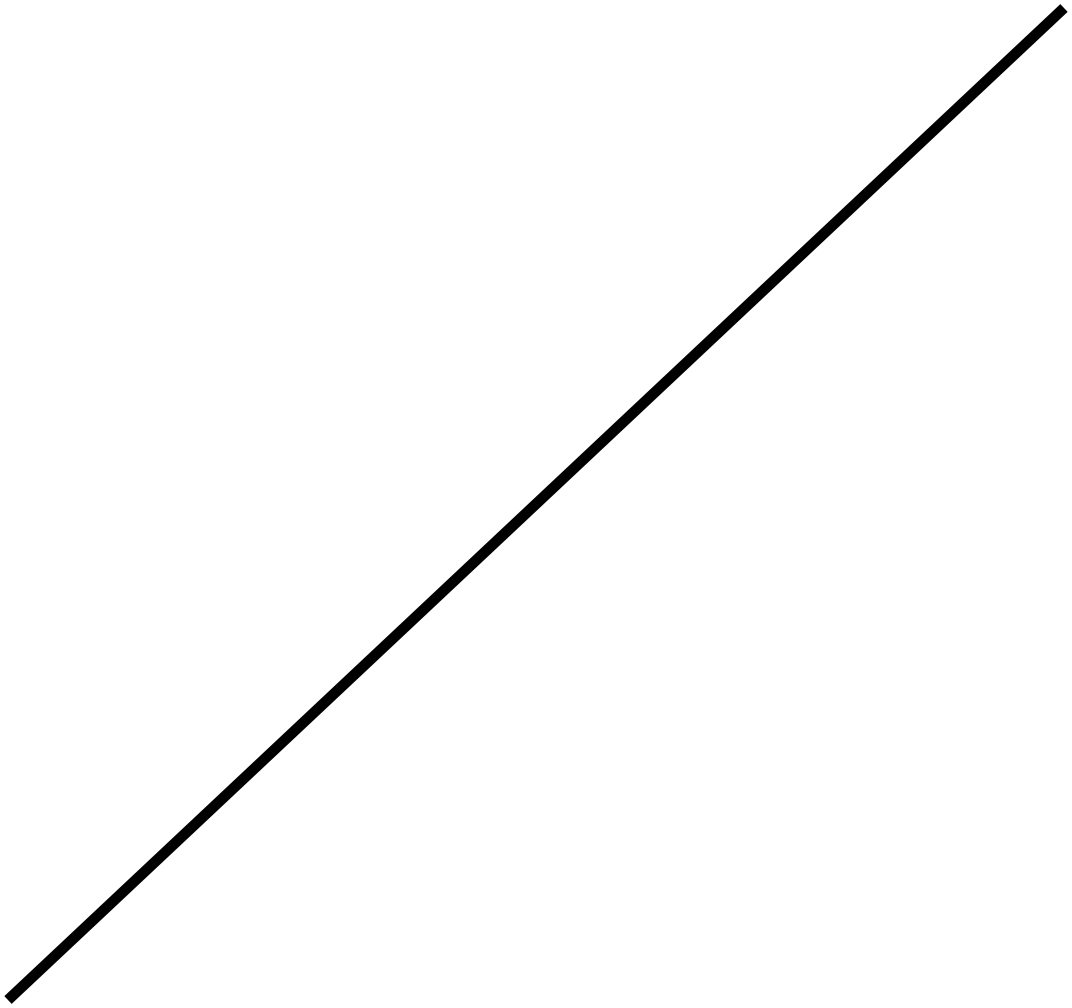

0.1

10

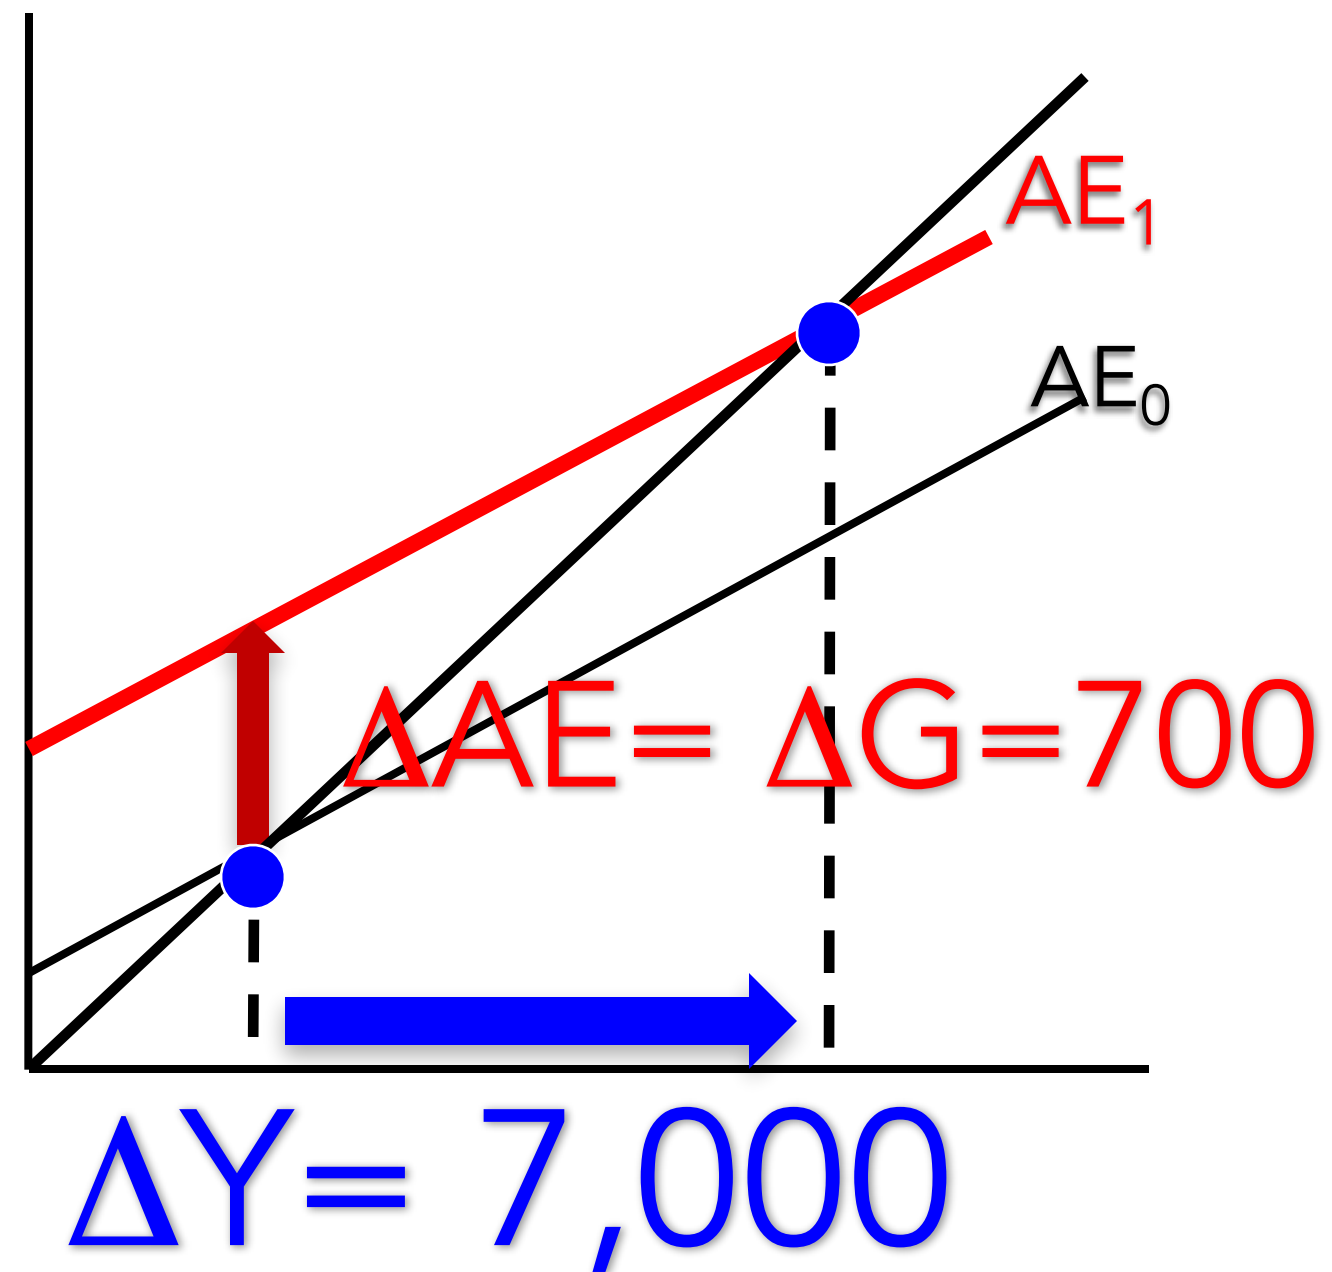

$\Delta A E = \Delta G = 700$

NY = 7,000

Example: $\Delta G = 700$ MPC = 0.9

Change in Equilibrium Y :

$$\Delta Y = \Delta G \left(\frac{1}{1 - \text{MPC}} \right)$$

$$\Delta Y = 700 \left(10 \right)$$

$$\Delta Y = 7,000$$

A 700 increase in government spending
generates a 7,000 increase in GDP
