

$AE < 5,000$

Output = 5,000

AE₀

1. Is the economy at equilibrium?

2. TotalSpending($\succ \equiv \prec$)Output

3. Inventories (rise, fall, remain the same)

4. Firms will (increase, decrease, not change) output.

5. Once the Economy reaches equilibrium, will the economy experience a (recessionary, inflationary) gap? Size of the Gap = _____

6. At equilibrium the economy experiences (unemployment/labor shortage)

5000 - 4000 = 1000

4000

5000

No

Recessionary gap

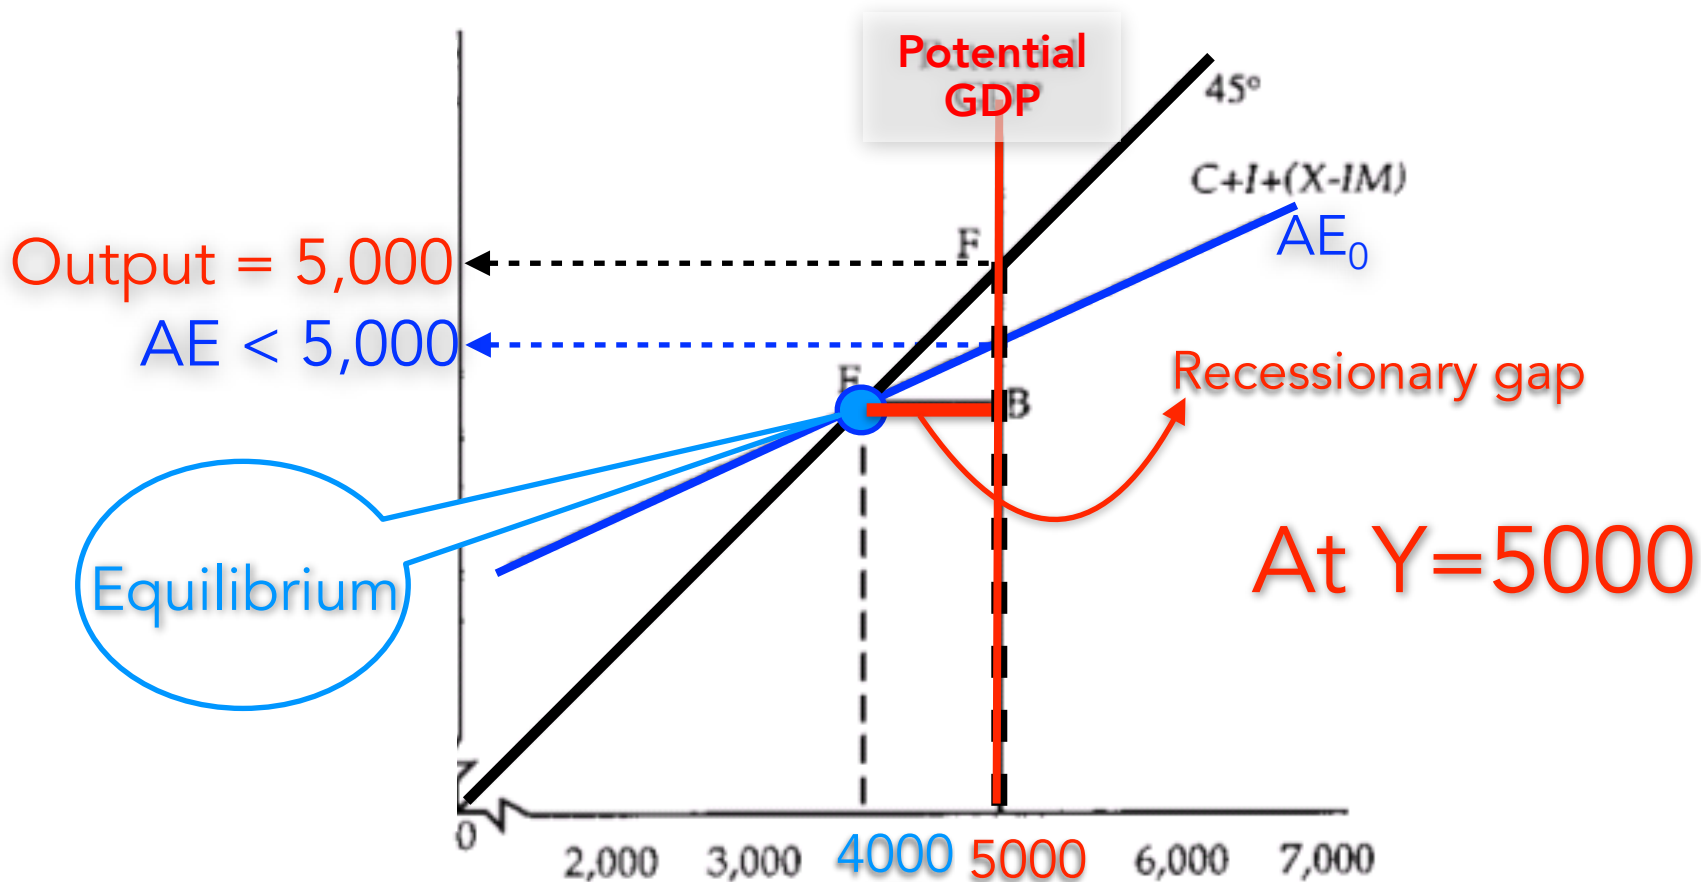

Equilibrium

At YY = 50000

**Potential
GDP**

1. Is the economy at equilibrium ? No
2. Total Spending($> = <$) Output
3. Inventories (rise, fall, remain the same)
4. Firms will (increase, decrease, not change) output.
5. Once the Economy reaches equilibrium, will the economy experience a (recessionary, inflationary) gap? Size of the Gap = $5000 - 4000 = 1000$
6. At equilibrium the economy experiences (unemployment/ labor shortages)
