

In the next example, assume  
that we **know** how many  
**workers** we want to hire and we  
need to **decide** how many units  
of **capital** to buy for those  
workers

L = 5

$$K = ?$$

In the next example, assume  
that we  $L=5$  know how many  
workers we want to hire and we  
need to  $K=?$  decide how many units  
of capital to buy for those  
workers

Capital (K)

6	692	980	1200	1384	1550	1692
5	632	896	1096	1264	1410	1550
4	564	800	960	1128	1264	1384
3	490	692	846	980	1096	1200
2	400	564	692	800	896	980
1	282	400	490	564	632	692
	1	2	3	4	5	6

Labor (L)
