

3000

AE > 3,000

Output = 3,000

**Potential
GDP**

AE₀

1. Is the economy at equilibrium?

2. TotalSpending(\geq \leq) Output

3. Inventories (rise, fall, remain the same)

4. Firms will (increase, decrease, not change) output.

5. Once the Economy reaches equilibrium, will the economy experience a (recessionary, inflationary) gap? Size of the Gap = _____

6. At equilibrium the economy experiences (unemployment/labor shortage)

$$5000 - 4000 = 1000$$

4000

5000

No

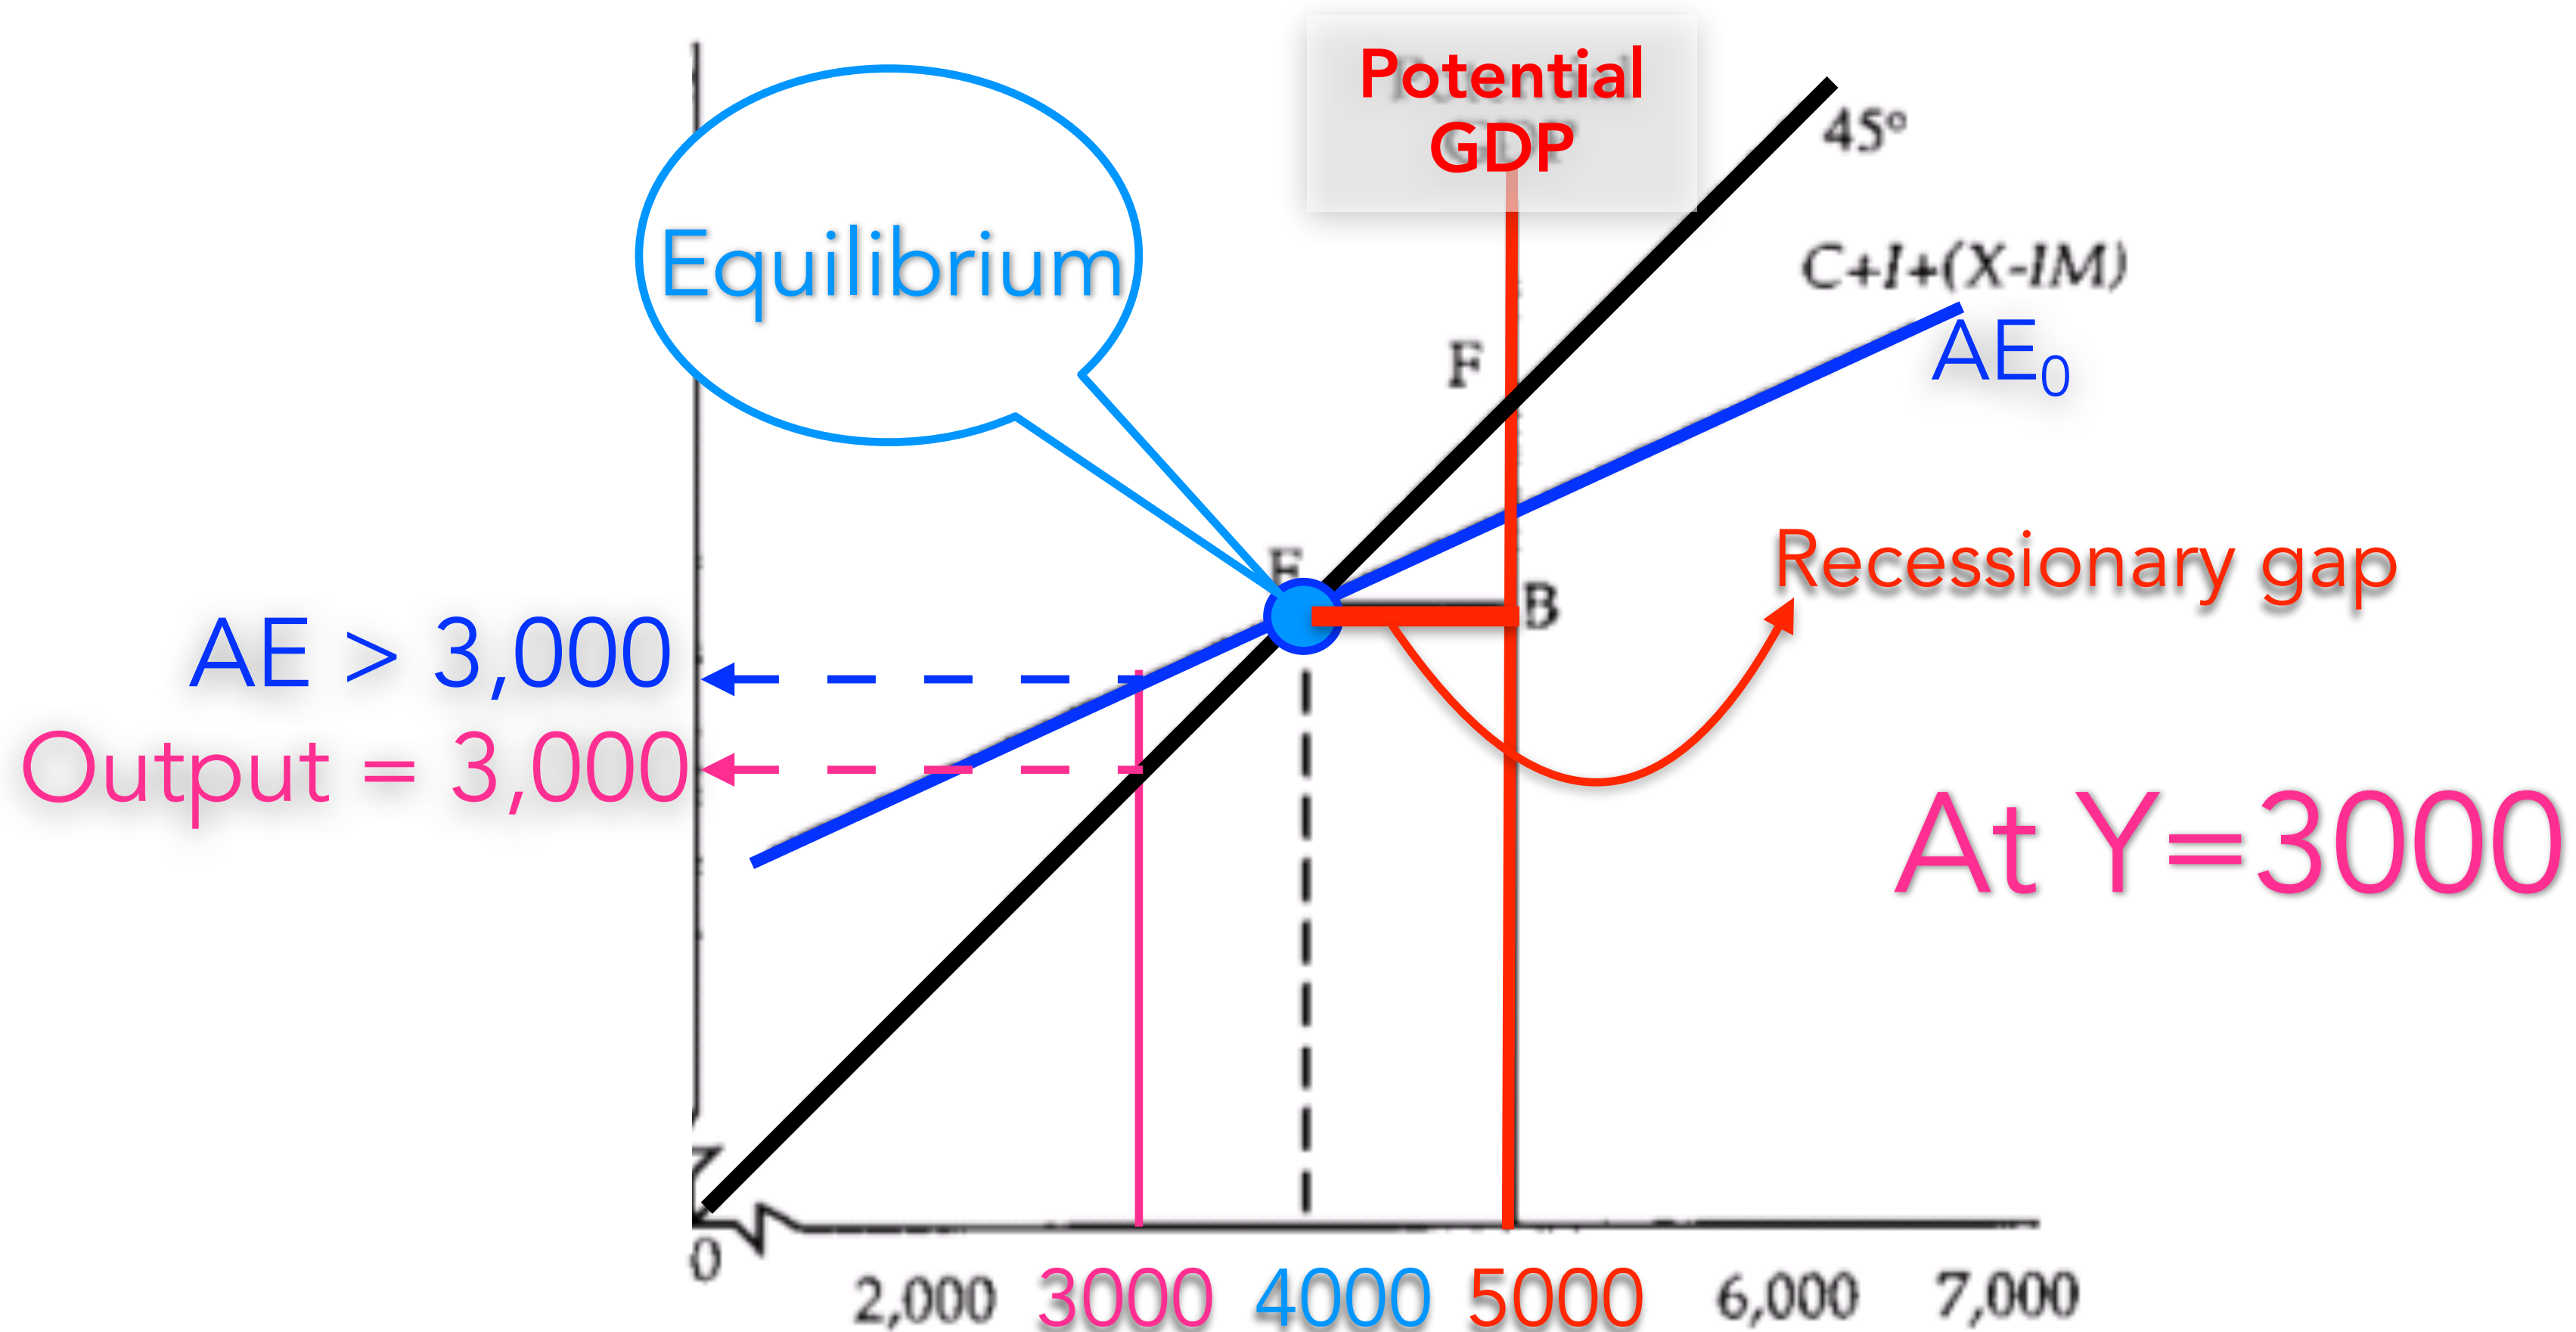

Recessionary gap

Equilibrium

At Y=30000

1. Is the economy at equilibrium? **No**
2. Total Spending ($>$ $=$ $<$) Output
3. Inventories (rise, fall, remain the same)
4. Firms will (increase, decrease, not change) output.
5. Once the Economy reaches equilibrium, will the economy experience a (recessionary, inflationary) gap? Size of the Gap = **5000 - 4000 = 1000**
6. At equilibrium the economy experiences (unemployment, labor shortages)
