

$$\text{NewC} = a + \text{MPC}(Y - T_x + T_r)$$

$$\text{NewC} = a + b(Y - T_x + T_r)$$

I will use “**b**”
instead of “**MPC**” to
write one instead of
three letters

$$\text{NewC} = a + by - bT_x + bT_r$$

$$\text{NewC} = a - bT_x + bT_r + bY$$

$$\text{NewC} = (a - bT_x + bT_r) + bY$$

New
Intercept

NewC = A + by

same slope: **NMC**

A
