

"It takes 70 divided by the interest rate
years to double your money"

The Rule of 70

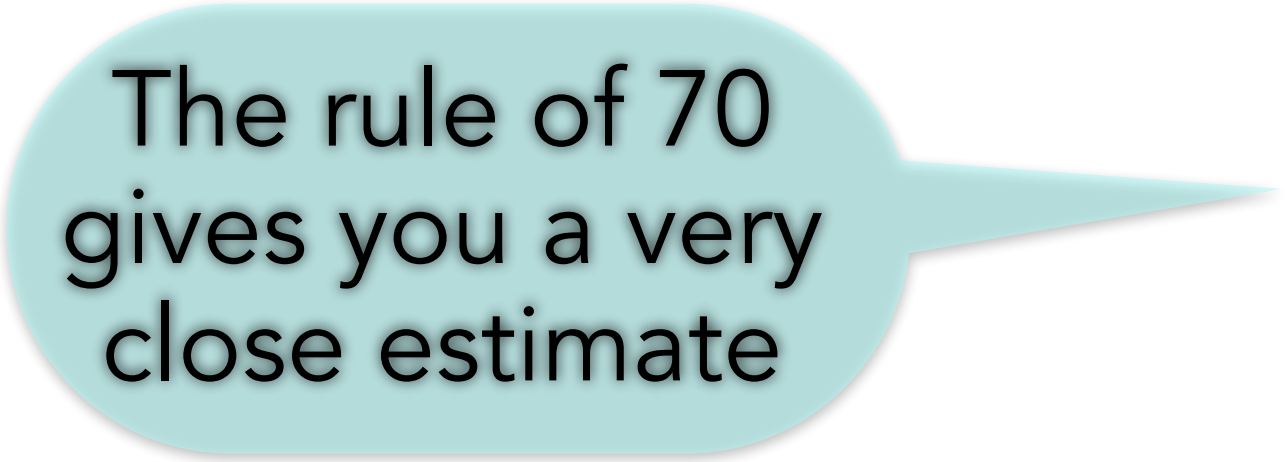

Example: If you invest \$1,000 at 7% interest. It takes

$(70/7=)$ 10 years to double your money

If you invest \$1,000 at 7% interest,
in 10 years you will have
approximately \$2,000

An easy way
to estimate
compound
interest

The rule of 70
gives you a very
close estimate

The Rule of 70

An easy way
to **estimate**
compound
interest

"It takes **70** divided by the **interest rate**
years to **double** your money"

Example: If you invest \$1,000 at **7%** interest. It takes
(**70/7=**)**10** years to **double** your money

If you invest \$1,000 at **7%** interest,
in **10** years you will have
approximately **\$2,000**

The rule of 70
gives you a very
close estimate
