Supply

Price per unit

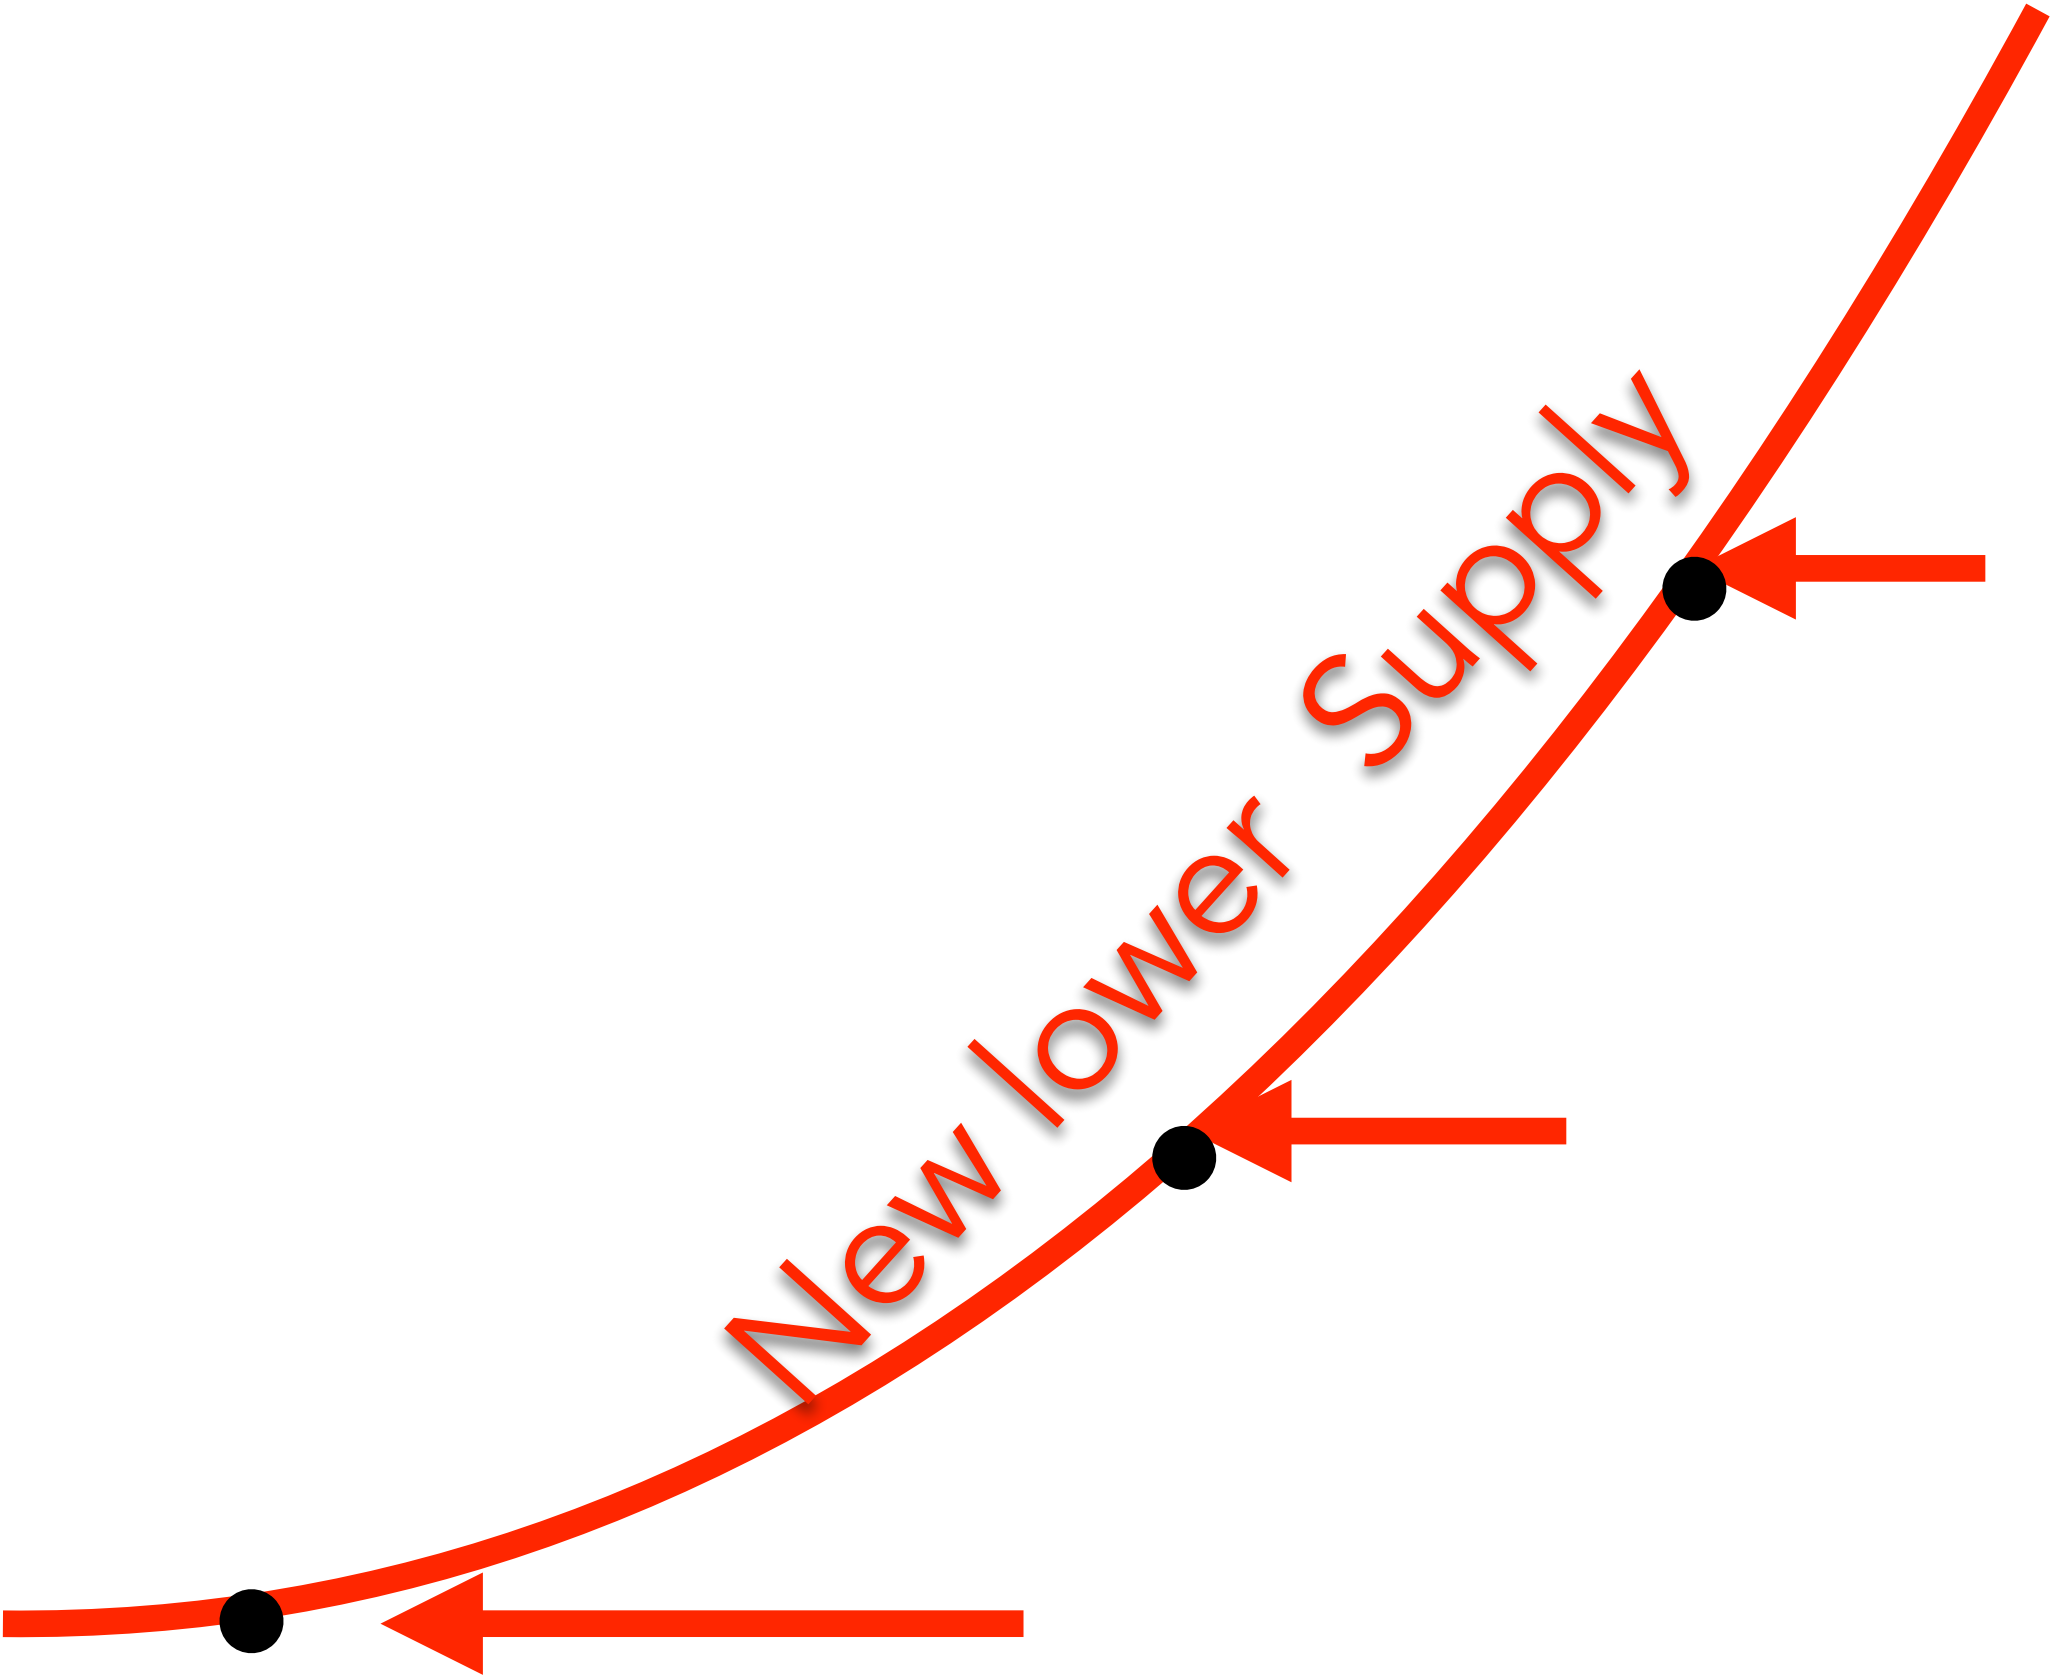

Quantity Supplied

Farmers prefer to plant
opium (the crop with the
higher price/profit) and
stop planting tea:

When the price of a substitute
in production increase (For
instance an increase in the
price of opium)

A decrease in supply of
tea

A leftward shift in supply
of tea

When the price of a **substitute in production increase** (For instance an increase in the price of opium)

Farmers prefer to plant opium (the crop with the higher price/profit) and stop planting tea:

A **decrease** in supply of tea
