If the firm grows larger it must add **more layers** of **management** just to keep production going

With 100  
workers and 100  
machines the firm  
produces 300 units  
of output

With **twice** the  
workers and **twice** the  
machines the firm  
produces **LESS** than  
**twice** the output

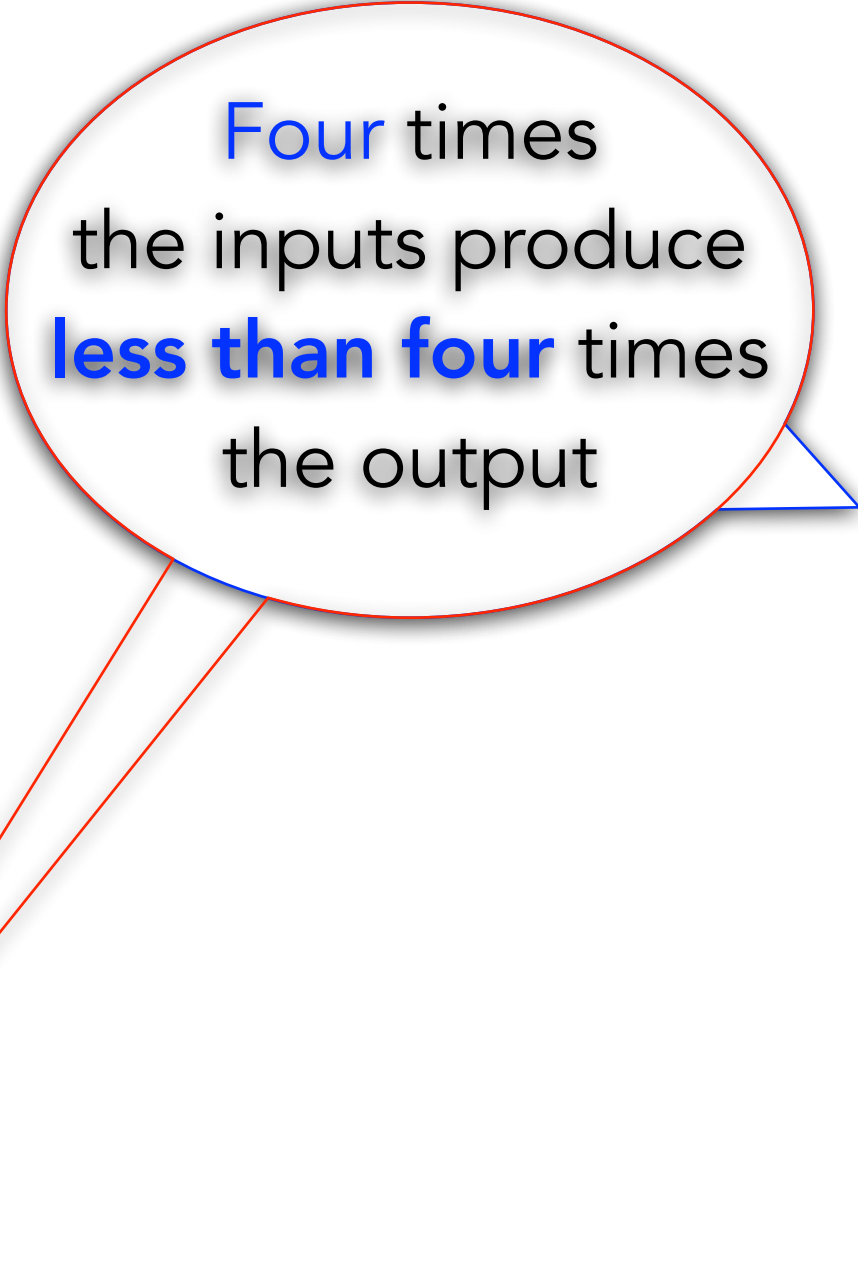

With **three times**  
**the number of** workers  
and machines the firm  
produces **less than three**  
times as many units of  
output

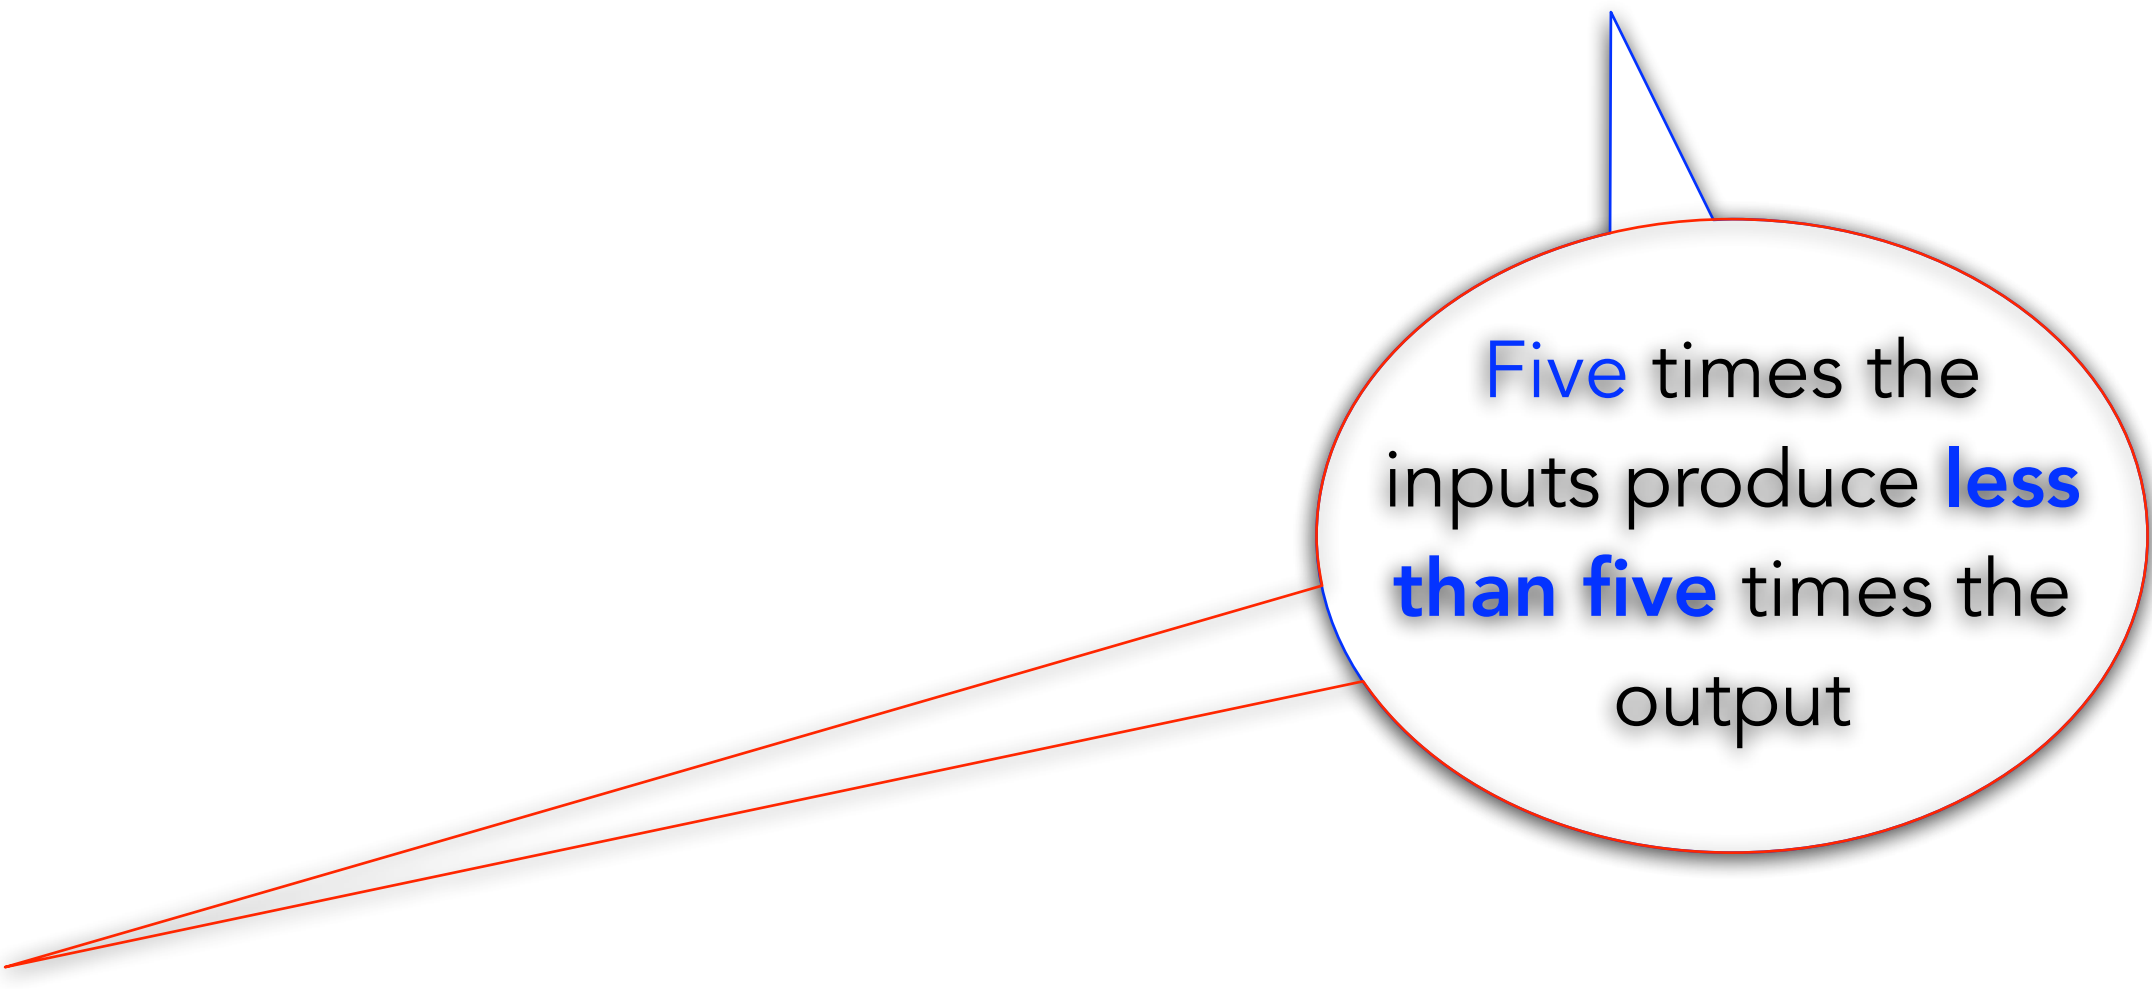

K

Four times  
the inputs produce  
**less than four** times  
the output

Five times the  
inputs produce **less**  
**than five** times the  
output

Total Product

ATC  
Increase

If output  
increase **less**  
**than** inputs and  
costs
