

In the next example, assume that we **know** how many **machines** we want to use and we need to **decide** how many **workers** to hire

$$K = b$$

$L = ?$

In the next example, assume that we know how many  
machines we want to use  $K = 6$  and we need to decide how many  
workers to hire  $L = ?$

# If we use 6 machines

6	692	980	1200	1384	1550	1692
5	632	896	1096	1264	1410	1550
4	564	800	960	1128	1264	1384
3	490	692	846	980	1096	1200
2	400	564	692	800	896	980
1	282	400	490	564	632	692
	1	2	3	4	5	6
