## Price Floor:0.8

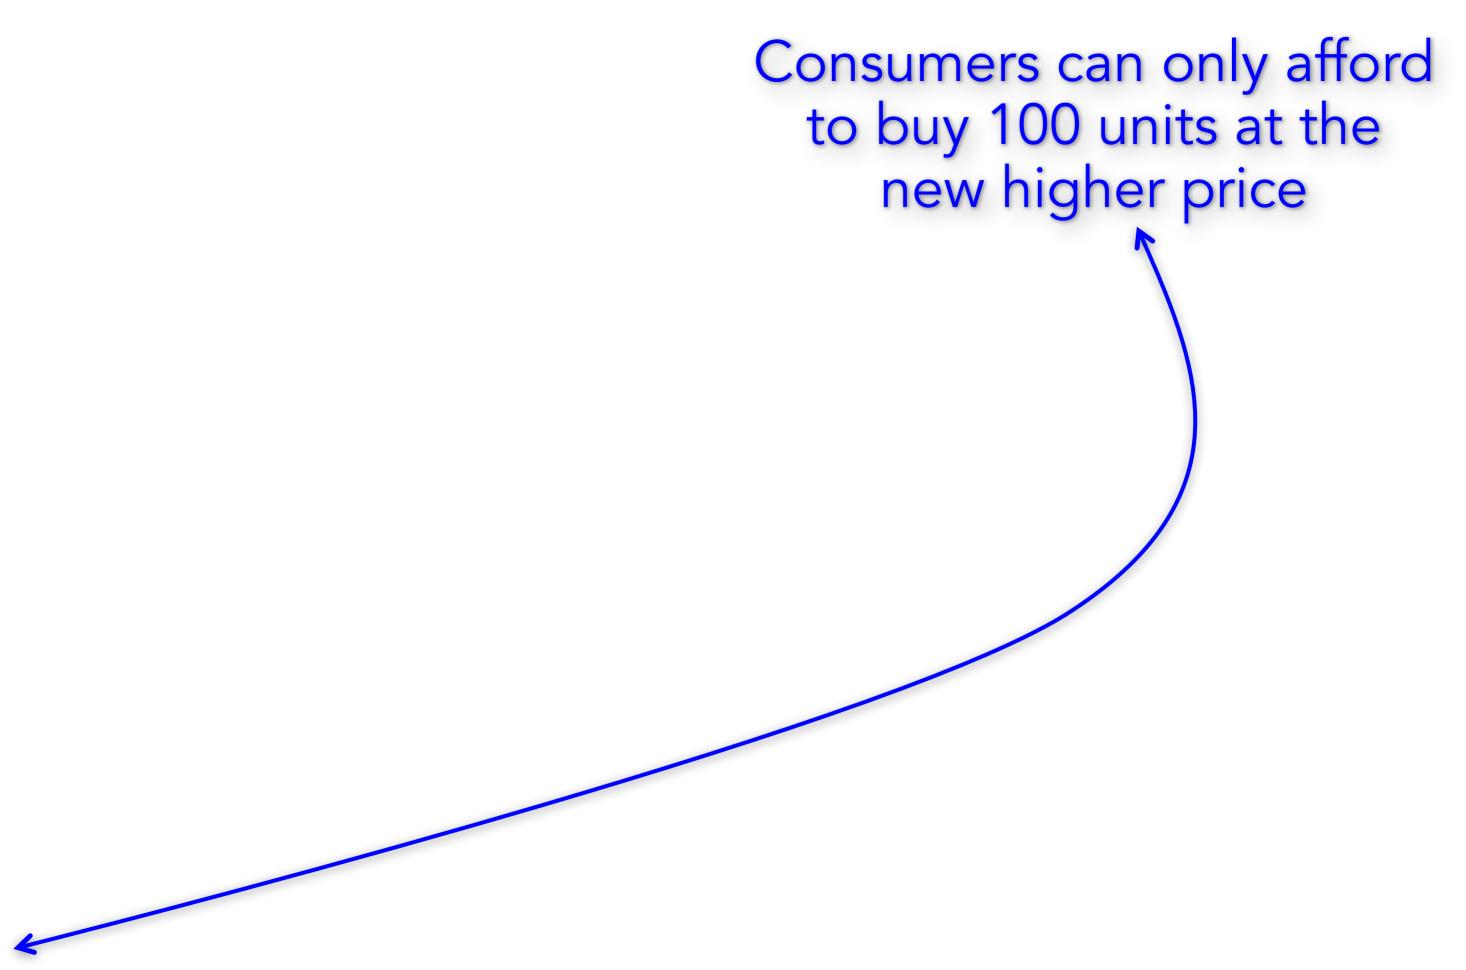

## CS at Equilibrium

#### CS after floor is imposed

\_\_\_\_\_\_\_\_\_\_\_\_

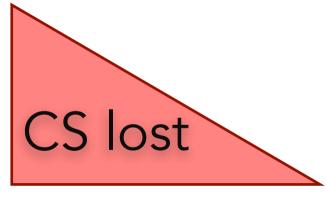

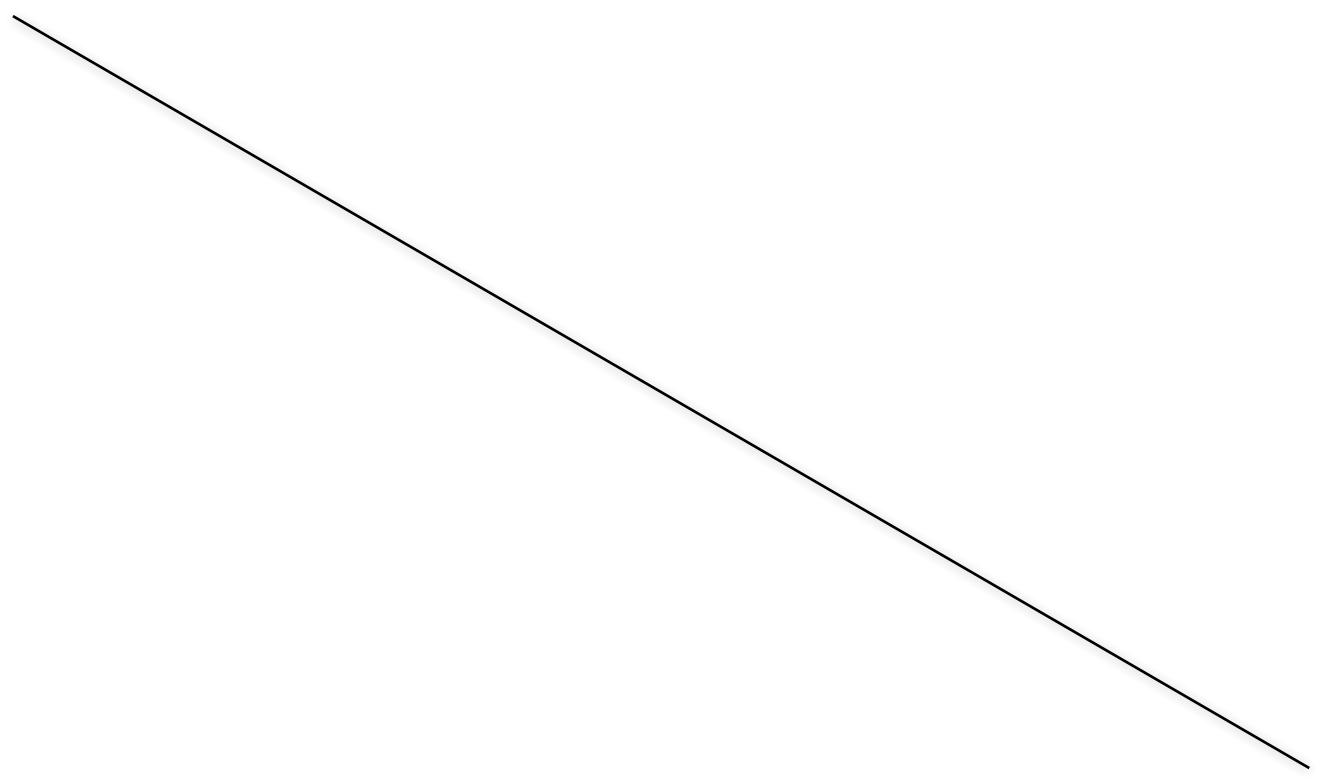

### Consumers can only get Consumer Surplus on 100 units

$$Q^{d}=100$$

# The imposition of a Floor (for example price supports)

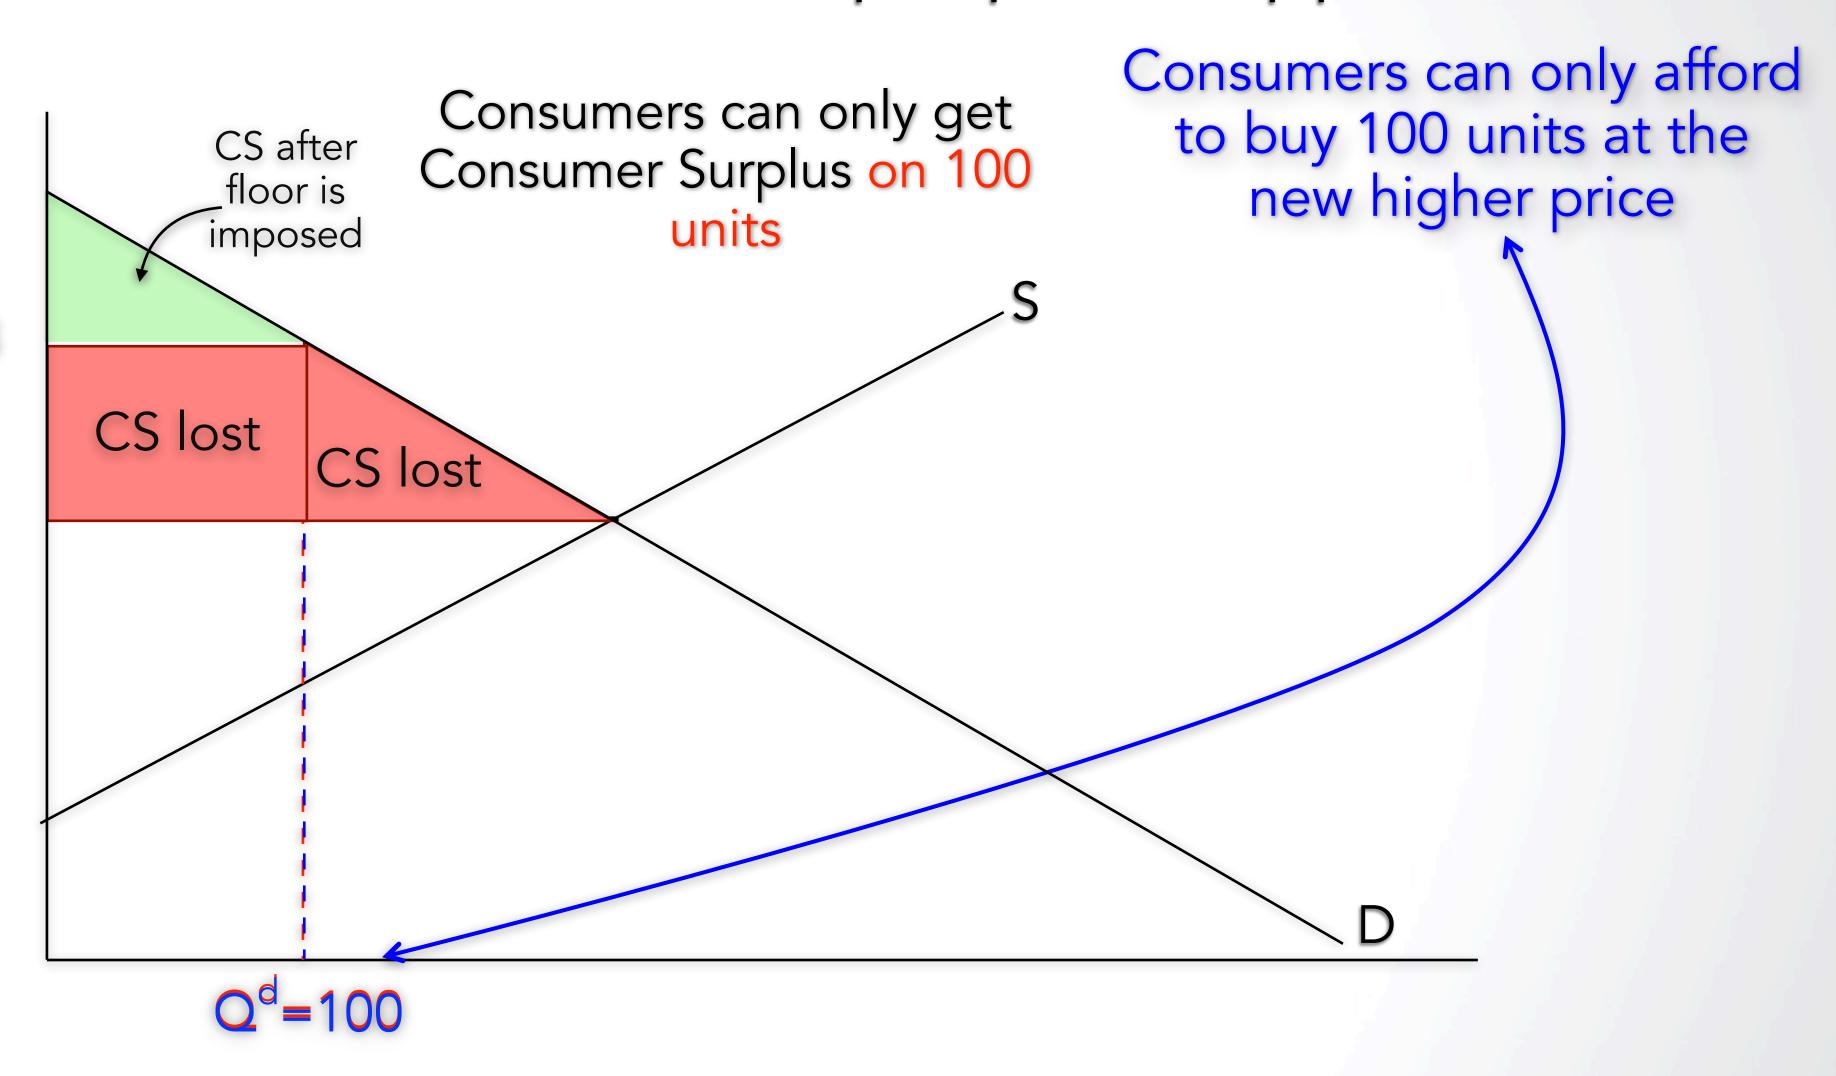

## Results in a decrease in the number of units purchased by consumers and a higher price

### Consumers pay a higher price on the fewer units they can afford to buy

# The imposition of a Floor (for example price supports)

Consumers pay a higher price on the fewer units they can afford to buy

Price Floor:0.8

Results in a decrease in the number of units purchased by consumers and a higher price
