When businesses report purchases made by Consumers, Firms, the Government and Other Countries, reported values

include both imported and domestic goods. If we were to leave the formula to calculate GDP as:

GDP = C + I + G + X

Expenditures Approach

GDP = C + I + G + X - M

We would be including foreign production as U.S. production. We must subtract foreign production:

Expenditures Approach

When businesses report purchases made by Consumers, Firms, the Government and Other Countries, reported values include both imported and domestic goods. If we were to leave the formula to calculate GDP as:

$$GDP = C + I + G + X$$

We would be including foreign production as U.S. production. We must subtract foreign production:

$$GDP = C + I + G + X - M$$

GDP = Production of new goods and services
