

## Total Revenue =\$240,000 Explicit Costs=103,000

## Implicit Costs \$137,000

## Economic Profit = 240,000 - 103,000 - 137,000 = Zero

The \$137,000 they take home exactly covers their implicit costs

## If they un-tie their resources they take home \$137,000

## Their Economic Profit is Zero

They take home the same amount whether they stay in business or not: they are indifferent between the two options

Their Economic Profit is Zero
