Cross Price Elasticity of Demand

Measures the sensitivity of **Demand** for one good (good **X**) in response to a change in **price** of a complement or substitute (good **Y**)

Measures how much demand for chicken increase, when the price of beef becomes more expensive

Measures how much demand for furniture increase, when house prices drop

Cross Price Elasticity of Demand

Measures the sensitivity of **Demand** for one good (good **X**) in response to a change in **price** of a complement or substitute (good **Y**)

Measures how much demand for chicken increase, when the price of beef becomes more expensive

Measures how much demand for furniture increase, when house prices drop

Cross Price Elasticity between goods x and y
